

- Cellular response to chemical stress
- Neutrophil degranulation
- Lysosome
- Oxidative phosphorylation
- mitochondrion organization
- Iron uptake and transport
- protein folding
- cell redox homeostasis
- Translation
- proton transmembrane transport
- regulation of cytokine production
- biological process involved in symbiotic interaction
- antigen processing and presentation of exogenous a
- Protein processing in endoplasmic reticulum
- mitochondrial transport
- response to interferon-gamma
- Vesicle-mediated transport
- autophagic cell death
- reactive oxygen species metabolic process
- pH reduction
