

- Neutrophil degranulation
- Fatty acid metabolism
- Lysosome
- late endosome to vacuole transport
- glycosyl compound metabolic process
- Platelet activation, signaling and aggregation
- regulation of lamellipodium organization
- regulation of defense response
- ribose phosphate metabolic process
- Metabolism of carbohydrates
- response to oxidative stress
- Fatty acid elongation
- Vesicle-mediated transport
- regulation of podosome assembly
- Biosynthesis of D-series resolvins
- selective autophagy
- EPH-Ephrin signaling
- Gluconeogenesis
- generation of precursor metabolites and energy
- regulation of cellular protein localization
